SAIKIRAN SOMANAGOUDAR

Chicago, IL | 312-918-1798 | saikiransomanagoudar@gmail.com | LinkedIn | GitHub | saikiransomanagoudar.com

EDUCATION

Illinois Institute of Technology, Chicago, IL, USA — August 2023 – August 2025
Master's in Computer Science

Reva University, Bengaluru, KA, India — July 2015 – August 2019
Bachelor's in Computer Science and Engineering

SKILLS

- **Languages:** Python, JavaScript, TypeScript, Java
- **Web & Styling:** React, Next.js, Redux, HTML, CSS, Tailwind CSS
- **Databases / Data:** SQL, MySQL, PostgreSQL, MongoDB, XML, JSON
- **Machine Learning Libraries:** Pandas, NumPy, NLTK, Matplotlib
- **Back-End & Cloud:** Flask, FastAPI, AWS, Kubernetes, Jenkins, Maven
- **AI & Dev Tools:** LangChain, Git, Jest, Docker, JIRA

WORK EXPERIENCE

Software Engineering AI Trainer — April 2026 – Present
LINKEDIN, Remote

- Designed and implemented multi-file coding tasks involving bug fixing, feature development, refactoring, and testing, simulating real-world software engineering scenarios
- Wrote clear technical specifications and developed reference implementations, ensuring alignment between requirements, code behavior, and expected outputs

Software Engineer — October 2025 – Present
CROWDDOING, Chicago, IL, USA

- Developed new interactive UI components and features for the AIME/Imagination Project web application using React, creating reusable component libraries that improved team workflow efficiency by 30%
- Built responsive data visualization dashboards integrating Django backend APIs, implementing efficient state management and data fetching that reduced rendering time by 40% and enhanced user experience
- Enhanced application performance by 25% through frontend optimization techniques including code splitting, lazy loading, and component rendering improvements while implementing automated testing pipelines and Docker-based CI/CD processes to ensure consistent quality standards

Senior Software Engineer — August 2022 – June 2023
WIPRO TECHNOLOGIES, Bengaluru, KA, India

- Spearheaded the migration of 30+ client-facing applications to AWS hybrid cloud, optimizing responsive design and frontend performance to reduce downtime by 25% and enhance user experience across multiple platforms
- Built and deployed interactive single-page application components using React with advanced state management and asynchronous process handling, reducing page load times by 15% and improving overall application performance
- Integrated AI-powered AWS CodeGuru to automate CI/CD workflows and code review processes for multiple web applications, reducing manual intervention by 50% and improving deployment reliability
- Engineered UI/UX enhancements for enterprise React web applications with server-side rendering implementation, optimizing component rendering efficiency, increasing average user session duration by 20% while reducing bounce rates
- Collaborated with product stakeholders following agile methodologies to gather requirements and translate them into technical specifications, conducting comprehensive unit and integration tests while participating in code reviews to maintain quality standards

PROJECTS

GIF Enigma | *React.js, TypeScript, Redis DB, Giphy API, Gemini-2.5-Flash-Lite* – GitHub | r/PlayGIFEnigma — March 2025 – April 2025

- Engineered Reddit-native game achieving **143K+ views** and **1.2K daily users**, demonstrating proficiency in building scalable applications with clean, well-documented TypeScript code following modern software engineering practices
- Designed dual-mode gameplay architecture with real-time leaderboards using Redis, applying data structure optimization and efficient algorithms for state management in interactive, data-intensive applications
- Integrated Gemini AI for intelligent word generation and hints, leveraging AI-driven insights to enhance user experience and automate workflows, showcasing ability to incorporate AI into problem-solving processes

Smart Homes | *React.js, Java, Jakarta EE, Python, Java Servlets, MySQL, MongoDB* – GitHub — August 2024 – September 2024

- Designed a full-stack e-commerce platform with multi-role access (StoreManager, Customer, Salesmen) using Java Servlets and React.js, supporting product, order, account and cart workflows
- Developed customer service and recommendation modules by integrating OpenAI GPT-4o via LangChain and Python Flask APIs, enabling semantic product search and automated ticket triaging with image/text input
