

SAIKIRAN SOMANAGODAR

Chicago, IL | 312-918-1798 | saikiransomanagoudar@gmail.com | [LinkedIn](#) | [GitHub](#) | saikiransomanagoudar.com

EDUCATION

Illinois Institute of Technology, Chicago, IL, USA

August 2023 – August 2025

Master's in Computer Science

Reva University, Bengaluru, KA, India

July 2015 – August 2019

Bachelor's in Computer Science and Engineering

SKILLS

- **Languages:** TypeScript, JavaScript, Python, Java
- **Web & UI Platform:** React, Next.js, Redux, HTML, CSS, Tailwind CSS, Component Libraries, Design Systems
- **APIs & Back-End:** REST APIs, BFF Patterns, Flask, FastAPI, Express, Node.js
- **Build, Deploy & Observability:** Vite, Webpack, Jest, Docker, Kubernetes, Jenkins, AWS, CI/CD
- **Databases / Data:** SQL, MySQL, PostgreSQL, MongoDB, Redis, JSON
- **AI & Dev Tools:** Claude, LangChain, Git, JIRA, Maven

WORK EXPERIENCE

Software Engineering AI Trainer

April 2026 – Present

LINKEDIN, Remote

- Designed and implemented multi-file coding tasks involving bug fixing, feature development, refactoring, and testing across React and TypeScript codebases, simulating real-world frontend platform engineering scenarios
- Wrote clear technical specifications and developed reference implementations, ensuring alignment between API contracts, component behavior, and expected outputs across client surfaces

Software Engineer

October 2025 – Present

CROWDDOING, Chicago, IL, USA

- Designed and shipped reusable React component libraries and design-system-level abstractions for the AIME/Imagination Project web application, improving team velocity by 30% and ensuring consistency across product surfaces
- Built responsive data visualization dashboards by evolving the BFF API layer over Django, applying clean client-server contracts and efficient state management that reduced rendering time by 40%
- Improved developer experience and reliability by 25% through code splitting, lazy loading, and component rendering optimizations, while hardening Docker-based CI/CD pipelines and automated testing for faster, safer deploys

Senior Software Engineer

August 2022 – June 2023

WIPRO TECHNOLOGIES, Bengaluru, KA, India

- Led the migration of 30+ client-facing applications to AWS hybrid cloud, improving frontend performance and reducing latency-related downtime by 25% across web and mobile surfaces
- Built shared single-page application components in React with advanced state management and asynchronous data flows, reducing page load times by 15% and standardizing patterns reused by other product teams
- Integrated AWS CodeGuru into CI/CD workflows to automate code review and reduce manual intervention by 50%, raising the reliability bar for the platform shared across enterprise applications
- Engineered UI/UX enhancements with server-side rendering for enterprise React apps, optimizing component rendering efficiency and increasing average user session duration by 20%
- Partnered closely with product and backend stakeholders in agile cycles to translate requirements into technical specs, drove unit and integration testing, and led code reviews to maintain platform quality

PROJECTS

GIF Enigma

March 2025 – April 2025

React.js, TypeScript, Vite, Tailwind, Redis, Express REST API – [GitHub](#) | r/PlayGIFEnigma

- Engineered a Reddit-native game reaching **143K+ views** and **1.2K daily users**, refactoring from WebView/Blocks to a hybrid inline/expanded React + TypeScript architecture with strong Lighthouse accessibility and SEO scores
- Designed an Express REST API with many endpoints over Redis for real-time leaderboards and dual-mode gameplay, applying clean client-server contracts and observability practices for a data-intensive interactive UI
- Integrated Gemini AI for word generation and hints, leveraging AI-driven workflows to enhance UX and demonstrating ability to build production-grade AI-powered consumer experiences

Smart Homes

August 2024 – September 2024

React.js, Java, Jakarta EE, Python, Java Servlets, MySQL, MongoDB – [GitHub](#)

- Designed a full-stack e-commerce platform with multi-role access (StoreManager, Customer, Salesmen) using Java Servlets and React.js, supporting product, order, account and cart workflows
- Developed customer service and recommendation modules by integrating GPT-4o via LangChain and Python Flask APIs, enabling semantic product search and automated ticket triaging with image/text input
