

SAKIRAN SOMANAGODAR

Chicago, IL | 312-918-1798 | saikiransomanagoudar@gmail.com | [LinkedIn](#) | [GitHub](#) | saikiransomanagoudar.com

EDUCATION

Illinois Institute of Technology, Chicago, IL, USA

August 2023 – August 2025

Master's in Computer Science

Reva University, Bengaluru, KA, India

July 2015 – August 2019

Bachelor's in Computer Science and Engineering

SKILLS

- **Languages:** Python, JavaScript, TypeScript, Java
- **Frontend:** React, Next.js, Redux, HTML, CSS, Tailwind CSS
- **AI & LLM:** LangChain, Gemini, RAG Pipelines, Prompt Engineering, NLTK
- **Backend & Cloud:** Flask, FastAPI, RESTful APIs, AWS, Docker, Kubernetes, Jenkins, Maven
- **Databases / Data:** SQL, MySQL, PostgreSQL, MongoDB, Redis, XML, JSON
- **ML Libraries & Dev Tools:** Pandas, NumPy, Matplotlib, Git, Jest, JIRA

WORK EXPERIENCE

Software Engineering AI Trainer

April 2026 – Present

LINKEDIN, Remote

- Designed and implemented multi-file coding tasks involving bug fixing, feature development, refactoring, and testing, simulating real-world full-stack software engineering scenarios
- Wrote clear technical specifications and developed reference implementations, ensuring alignment between requirements, code behavior, and expected outputs for AI model evaluation

Software Engineer

October 2025 – Present

CROWDDOING, Chicago, IL, USA

- Developed interactive, accessible UI components and reusable frontend libraries for the AIME/Imagination Project web application using React and TypeScript, improving team workflow efficiency by 30%
- Built responsive data visualization dashboards integrating Python/Django backend RESTful APIs with efficient state management and data fetching, reducing rendering time by 40% and enhancing user trust in outputs
- Enhanced application performance by 25% through code splitting, lazy loading, and component rendering optimizations, while implementing automated testing pipelines and Docker-based CI/CD processes to ensure consistent quality standards

Senior Software Engineer

August 2022 – June 2023

WIPRO TECHNOLOGIES, Bengaluru, KA, India

- Spearheaded the migration of 30+ client-facing applications to AWS hybrid cloud with Docker-based container orchestration, optimizing frontend performance and reducing downtime by 25% across multiple platforms
- Built and deployed interactive single-page application components using React and TypeScript with advanced state management and asynchronous process handling, reducing page load times by 15%
- Integrated AI-powered AWS CodeGuru to automate CI/CD workflows and code review processes, reducing manual intervention by 50% and improving deployment reliability and observability
- Engineered UI/UX enhancements for enterprise React applications with server-side rendering, optimizing component rendering efficiency and increasing average user session duration by 20%
- Collaborated with product stakeholders and designers following agile methodologies to gather requirements, translate them into technical specifications, and maintain secure coding and test coverage standards across the full stack

PROJECTS

GIF Enigma | *React.js, TypeScript, Redis, Giphy API, Gemini-2.5-Flash-Lite* – [GitHub](#) | [r/PlayGIFEnigma](https://r/playgifenigma)

March 2025 – April 2025

- Engineered Reddit-native GenAI-powered game achieving **159K+ views** and **1.6K daily users**, demonstrating proficiency in building scalable full-stack applications with clean TypeScript code and modern engineering practices
- Designed dual-mode gameplay architecture with real-time leaderboards backed by Redis, applying data structure optimization and efficient algorithms for state management in interactive, data-intensive applications
- Integrated Gemini LLM with prompt engineering for intelligent word generation and contextual hints, leveraging AI-driven orchestration to enhance user experience and automate gameplay workflows

Smart Homes | *React.js, Java, Jakarta EE, Python, Java Servlets, MySQL, MongoDB* – [GitHub](#)

August 2024 – September 2024

- Designed a full-stack e-commerce platform with multi-role access (StoreManager, Customer, Salesmen) using Java Servlets and React.js, supporting product, order, account, and cart workflows through RESTful APIs
- Developed customer service and recommendation modules by integrating OpenAI GPT-4o via LangChain orchestration and Python Flask APIs, enabling retrieval-augmented semantic product search and automated ticket triaging with image and text input
