Chicago, IL | 312-918-1798 | saikiransomanagoudar@gmail.com | [Linkedin](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Software Engineer specializing in full stack development with React, TypeScript, Node.js and Python frameworks to deliver robust frontend and backend solutions. Built reusable UI component libraries, interactive data dashboards and led AWS hybrid cloud migrations with CI/CD enhancements. Aiming to develop AI-driven clinical applications and scalable LLM workflows to enhance healthcare reliability.

EDUCATION

Illinois Institute of Technology, Chicago, IL, USA

Master's, Computer Science

Aug 2023 - Aug 2025

Chicago, IL, USA

Reva University, Bengaluru, KA, India

Bachelor's, Computer Science and Engineering

Jul 2015 - Aug 2019

Bengaluru, KA, India

SKILLS

Programming Languages: JavaScript, TypeScript, Python, Java

Front-End & Frameworks: React, Next.js, Redux, HTML, CSS, Tailwind CSS, Context API

Back-End & Cloud: Node.js, Express, Flask, FastAPI, RESTful APIs, GraphQL, AWS, Docker, Kubernetes, Jenkins

Databases & Data Formats: SQL, MySQL, PostgreSQL, MongoDB, XML, JSON

Testing & Performance: Jest, React Testing Library, Code splitting, Lazy loading, SSR

AI & Development Tools: LangChain, LangGraph, Git, JIRA, Agile/Scrum, CI/CD

WORK EXPERIENCE

LINKEDIN

Software Engineering AI Trainer

Apr 2026 - Present

Remote

- Designed and implemented multi-file JavaScript and TypeScript coding tasks-including bug fixes, new features, refactoring, and unit tests-using Git and Jenkins for version control and continuous integration, which helped trainees practice real-world frontend engineering and improved their code-quality confidence
- Wrote detailed technical specifications and reference implementations, aligning requirements with code behavior and expected outputs while using Redux patterns like normalized state and immutable updates, which reduced specification misunderstandings and accelerated feature delivery

CROWDDOING

Software Engineer

Oct 2025 - Apr 2026

Chicago, IL, USA

- Built and shipped interactive, accessible UI components for the AIME/Imagination Project web application using React, Next.js, and TypeScript, creating reusable component libraries that improved team workflow efficiency by 30%
- Developed responsive data visualization dashboards integrating backend REST APIs and GraphQL endpoints, implementing efficient state management with Context API, memoization, and data fetching that reduced rendering time by 40%
- Improved application performance by 25% through code splitting, lazy loading, and component-level rendering optimizations, and implemented unit tests with Docker-driven CI/CD pipelines to maintain quality and cross-browser compatibility

WIPRO TECHNOLOGIES

Senior Software Engineer

Sep 2019 - Jun 2023

Bengaluru, KA, India

- Spearheaded the migration of 30+ client-facing applications to AWS hybrid cloud and Kubernetes clusters, optimizing responsive design and frontend performance to reduce downtime by 25% and improve user experience across browsers and devices
- Built interactive single-page components in React with TypeScript, using Redux for state management and async calls to RESTful APIs, implemented unit tests, and cut page load times by 15% while improving Core Web Vitals
- Integrated AWS CodeGuru into CI/CD workflows and led code reviews across multiple web applications, reducing manual review effort by 50%, improving deployment reliability, and mentoring junior engineers on frontend best practices
- Engineered UI/UX enhancements for enterprise React applications with server-side rendering and accessibility fixes, collaborating with product, design, and backend teams to consume RESTful APIs, which increased average session duration by 20%

PROJECTS

ConvoOps [GitHub](#)

Apr 2026 - Apr 2026

- Developed an AI-powered workflow automation platform using Python, FastAPI, LangGraph, React, and TypeScript that converts meeting transcript PDFs into structured action plans and orchestrates automated execution across GitHub, Gmail, Google Calendar, and Google Drive through MCP integrations
- Implemented a human-in-the-loop multi-agent execution pipeline with parallel intelligence extraction, approval-based task routing, and audit logging, enabling secure automation while maintaining user oversight and traceability.
- Built a responsive React frontend and FastAPI backend with REST APIs, transcript processing, and real-time workflow management, leveraging OpenAI GPT-4o, LangChain, and LangGraph to deliver scalable end-to-end automation.

GIF Enigma [GitHub](#)

Mar 2025 - Apr 2025

- Engineered a Reddit-native game in React and TypeScript achieving 160K+ views and 1.7K daily users, with strong Lighthouse scores and clean, well-documented code following modern frontend engineering practices
- Designed a dual-mode rendering architecture (inline + expanded) with real-time leaderboards backed by Redis, applying data structure optimization for state management in interactive, data-intensive UI
- Integrated Gemini AI for word generation and hints via a REST API, applying prompt engineering techniques to optimize hint relevance and user engagement. Live link: <https://www.reddit.com/r/PlayGIFEnigma/>
